

Key features

- ◆ UV Fluorescent or Phosphorescent options.
- ◆ Can be combined with either hard or soft touch outer finish.
- ◆ UV reactive version available as printing on conventional push-on and collet knobs.
- ◆ No price penalty

UV fluorescent and phosphorescent indicator line option

Sifam Instruments now offers this option to meet the changing needs of various industries, in particular the audio market. As the names imply the UV Fluorescent "glows" under UV light and the Phosphorescent, once charged by either daylight or artificial light, can be seen under dark conditions for a length of time proportional to the amount of charge it has received.

Both the UV Fluorescent and Phosphorescent options can be incorporated in the white indicator line on all 2 shot push-on and collet knobs, irrespective of whether the outer body is from a hard or soft touch material. This is achieved by the addition of an additive in the first shot moulding which incorporates the indicator line. The standard body colour is black, with other colours available to special order.

The UV Fluorescent effect can also be achieved in the printing of conventional push-on and collet knobs together with

appropriate accessories such as caps and nut covers. Apart from white printing other colours can be offered.

Standard pricing applies to each option although certain minimum quantities will be required.

Please contact the Sales Office for more specific information on the above.

Please refer to the Control Knobs catalogue for full details of the extensive range of knobs.
